The First Coins

the first coins were created around 700 bc by the lydians, a group of people that lived in what is now turkey. coins then spread to greece and rome.

but the worldwide use of paper money and coins took a long time to occur. even in the early days of the united states, bartering or trading was still a popular way to exchange goods and services.

before the early north american settlers won the war that created the united states, settlers used spanish, english, and french money. but, in order to pay for the war, the united states needed to develop one common currency for all the colonies. in fact, the famous paul revere designed the first coins for the “continental currency.”

after the revolutionary war and the new u.s. constitution was ratified, congress passed the “mint act” on april 2, 1792. The mint act established the coinage system of the united states, and the dollar as the official u.s. currency.

in 1793, the philadelphia mint produced the first coins!
