**Instructions:** In the text below, circle the letters that should be capitalized. Use a red pencil to circle the letters that should be capitalized as proper nouns. Use a blue pencil to circle the letters that should be capitalized to mark the beginning of a sentence or the name of a chapter.

## Making Modern Bills

in order to defeat counterfeiters, most countries make their money using special hard-to-copy practices. since 1879, the paper for all u.s. currency has been made by one company, crane & co., in dalton, massachusetts. bills are printed on paper made using a secret formula. u.s. dollars are made of a mixture of about one-quarter linen and three-quarters cotton, with some red and blue silk fibers sprinkled throughout.

however, the bureau of engraving and printing (bep) keeps the exact formula a secret, the way coca-cola protects the secret recipe for its famous soda pop. a special thread below the portrait glows in ultraviolet, "black," light. the ink on genuine bills is raised a little bit so you can feel it when you run your fingers over the printing. raised printing is called intaglio printing. banks and some stores use special pens with ink that turns from black to yellow on real cotton and linen bills, but stays black on fake bills copied on cellulose, or wood-based, paper.

**Instructions:** Read each sentence. Choose two words from the Word Bank that create a hyphenated compound adjective that completes the sentence. Write the new word in the blank space and underline the noun that each adjective describes.
